Defendants,

-----X

1. Attached hereto are the reports of Dr. Robert S. April. The opinions of Dr. April are set forth in the reports.
2. The basis/reason for the opinions are a review of the plaintiff's medical records, deposition transcript of plaintiff and Sancho Scott (to be forwarded to Dr. April upon receipt of same) and examination of Mr. Armstrong.
3. A resume of Dr. April is attached along with a list of cases Dr. April has testified in the last 4 years.
4. Dr. April's compensation is as follows:

Independent Medical Examination	\$ 850.00
Hourly Review	\$ 400.00
Trial Appearance inclusive of pre-trial meetings for Trial	\$6,500.00

To Whom It May Concern:

RE: Mr. Justin Armstrong, age 24  
Date of Accident: January 06, 2010

This is the neurological liability examination for the above named, 24-year-old male plaintiff who came to this office alone and gave the following history.

He stated on the above date he was assaulted and hit over the head with two bottles of alcohol. He was knocked out momentarily and when he awakened, he was bleeding from the head and told by the paramedics who came to the site of the accident that he should be taken to the hospital. He refused. They wrapped his scalp wound and left him at the site.

Asked how he is now, he responded, "I still have headaches and recurrent pains a couple of times a week. When it happens I go to sleep."

He explained he is unemployed at the present time, but that he has begun an entertainment company, which he hopes will succeed. He was in a very big hurry to catch a plane after this examination, which he said he was going to take from LaGuardia. He had come to this examination by taxi cab.

He stated, when asked about higher intellectual functions, that "My memory, I do not want to say it is messed up, but when it first happened I felt dumb like I could not do anything at all. I had trouble with conversations and so forth, but gradually I have become better and now I only have pain, which I feel basically in my neck passing on to the top of the my head to the front of my head. I do not take medication, I am not on drugs."

On the other hand, he admitted that Dr. Zaharakis had put him on Lexapro because he was having panic attacks -- such as, waking at night, thinking he was having a heart attack. It took him a while to accommodate this and he finally did and it is no longer present. He is not taking Lexapro at this time.

Mr. Justin Armstrong  
February 11, 2011

He states that sometimes when he is asked to talk, the speech is slow, but for the most part it is normal. He knows what he is doing and what he wants to say. He explained that he sells sponsorships for entertainment programs. When he is up in front of people with a presentation, he sometimes has to hesitate or has difficulty getting the words out.

He denied other accidents and personal injury matters. He denied illnesses. He does not drink or smoke.

**NEUROLOGICAL EXAMINATION IN THIS OFFICE:** He was a very large young man who was perfectly healthy and looked to be in no distress. He was 6 ft 3 in, 230 lbs and had a BP 110/70, PR 80, and R 20. The only external sign of injury was a healed scar on the left occiput. It measures less than 1 inch. It was not tender to palpation.

**CRANIAL NERVE EXAMINATION:** There were full eye movements, pupillary constriction, facial symmetry, speech output, and range of motion of the neck. The latter was 90° lateral rotation with 40° extension and full flexion to chest (normal range is 75-90° lateral rotation, 40-60° extension and full flexion to chest). The neck movement was not associated with radiating pain to the neck and shoulder. Shoulder shrug was full. The plaintiff had no problems with hearing or vision.

**MOTOR EXAMINATION:** Motor power was 5/5 in the muscles of upper and lower limbs on individual muscle testing. There was no atrophy to inspection or measurement. Fasciculations were not in evidence. There was no problem with the gait and stance. Biceps were 34-cm bilaterally, forearms were 30-cm and the calves measured 33-cm. Fasciculations were not in evidence. Tandem walking was normal. The plaintiff could walk on toes and heels without difficulty. Tremor and rigidity were absent. All reflexes were present and equal in upper and lower limbs (including triceps, biceps, periosteal, patellar and Achilles reflexes). Babinski sign was absent. Romberg sign was absent.

**MECHANICAL EXAM:** Straight leg raising was negative to 80° bilaterally (normal range is 75° to 90°) without pain. Bowstring sign was absent. There was no trouble sitting unaided. Percussion and palpation of the vertebral column were unremarkable. There was no spasm of the paraspinal musculature. The range of motion of the lumbar spine was 90° flexion, 45° extension, 50° left and right lateral bending, and 50° right and left thoracicolumbar rotation (normal range is 75-90° flexion, 40-60° extension, 45-60° lateral bending and 40-60° rotation). Range of motion of the upper limbs was normal – that is, 180° extension at the shoulder and full reach behind the back, without limitation in pronation, supination, elbow flexion (130°) and wrist flexion (90°). There was no Tinel sign or other signs of carpal tunnel syndrome. All range of motion measurements were done with reference to an orthopedic protractor.

**SENSORY EXAMINATION:** Perception of touch, pin and vibration was normal and symmetrical in all limbs and the parts of the body axis that was stimulated, particularly both upper extremities. There was no mottling of skin or changes in local temperature or skin turgor.

Mr. Justin Armstrong  
February 11, 2011

3

**IMPRESSION:** There were no objective neurological findings.

Based on my examination, I have concluded with reasonable medical certainty that the accident record might have produced a cerebral concussion, but no permanent brain damage and no neurological diagnosis of any permanency.

He is not disabled and is independent in all activities of daily living.

There was no need for further neurological intervention.

I, Robert S. April MD, being a physician duly licensed to practice medicine in the State of New York, pursuant to CPLR Section 2106, hereby affirm under the penalty of perjury that the statements contained herein are true and accurate and that this examination was performed for purposes of examination with respect to the incident described and does not imply a doctor-patient relationship.

Sincerely,

Robert S. April, M.D.

Re: Mr. Justin Armstrong  
Date of Accident: January 06, 2010

Dear Mr. Gilbert:

I am in receipt of your March 7, 2011, letter including plaintiff's records from St. Vincent's Hospital and Dr. Bush.

Let me tabulate my review of these new data which will serve as supplemental to the report of February 11, 2011, already filed with you.

- Handwritten office notes from Dr. Michael Bush are difficult to read. They state the facts of the history and his treatment at SVH, his normal vital signs, and his generally normal examination. There is statement that EKG and ESR will be done but the other conclusions are illegible. The questionnaire about general health was readable and conveys the picture of a healthy young man.
- EKG is normal.
- St. Vincent's Hospital ER records were read. They are dated three days after the accident of record. He complained of subjective dizziness. Vital signs were stable with rapid pulse.
- Discharge diagnosis is laceration, facial/scalp contusions.
- He noted that there was no loss of consciousness after the injury but that he had pain, nausea and vomiting since the date of accident.
- Work up included normal CT scan of brain.

These data do not lead to any change of opinion from that already expressed about this matter in my prior communication of February 11, 2011.

I, Robert S. April MD, being a physician duly licensed to practice medicine in the State of New York, pursuant to CPLR Section 2106, hereby affirm under the penalty of perjury that the statements contained herein are true and accurate and are my own work product.

Sincerely,  
Robert S. April, M.D.  
RSA/vvc
